SUMMARY

Final-year CS engineer at IIIT Sri City (CGPA **8.5/10**), currently interning at Kookar AI. Build production backend on FastAPI, Celery, Redis, and AWS, including a WhatsApp recruiting agent that has screened **500+ candidates**, the order pipeline behind **6 partner platforms at 60+ orders/day**, and **10+ LangGraph workflows** running in production. Also own the daily Northstar BI report the founders read every morning. Looking for full-time Software Engineer, Backend, or AI Engineer roles.

EXPERIENCE

AI Engineer Intern | Jun 2025 to Present
Kookar AI, Consumer AI startup | Gurgaon, India

- **Architected a WhatsApp AI recruiting agent** (Node.js, Mistral) that autonomously screened **500+ candidates**, feeding a recruiter pipeline that closed **10 hires** and replaced a manual screening loop: 3 specialized LLM agents (resume analysis, question generation, conversation), human-in-the-loop approval, React + Socket.IO live dashboard, and Redis-backed queues for concurrent interviews.
- **Engineered the order-orchestration backbone** for a grocery platform processing **60+ orders/day across 6 partner integrations**: cart orchestrator, retry-aware tracking ledger with ops-alert escalation, post-invoice wallet debit with Slack summaries, structured refund signaling, and live-inventory pre-checks.
- **Designed a distributed async pipeline** on Celery, Redis, AWS EventBridge, and SQS routing **thousands of events/day** across **20+ task types** on EC2 with idempotent handlers, exponential backoff, dead-letter queues, and at-least-once delivery semantics.
- **Eliminated a recurring weekly on-call page** by root-causing a silent browser-automation bug swallowing network errors in the payment-lifecycle path, restoring alarm trust and freeing engineering time spent triaging false escalations.
- **Built a Pydantic-typed, LangSmith-traced orchestration and evaluation layer** powering **10+ LangGraph agents in production**, including a 6-agent / 15-step workflow that completes in **~40 seconds** (replacing a multi-minute manual process), with evaluator configs grading live runs across vendor swaps (OpenAI / Anthropic / Mistral).
- **Owned business intelligence and observability for the org**: shipped a **daily Northstar pipeline** (GMV, WAU/MAU, churn-risk signals, escalation breakdowns) auto-emailed to founders as HTML and PDF, **4 Grafana dashboards** (agent metrics, LLM cost, escalations, state observability), and one-off cohort and funnel analyses that founders and ops use directly.

PROJECTS

Creative Writing Studio: Multi-Agent GenAI Platform Live | GitHub
LangChain, Mistral, FAISS, Streamlit

- Built and shipped a public multi-agent writing platform: 3 specialized LangChain agents (Plot, Dialogue, Editor) co-author long-form stories with FAISS vector retrieval over running context and Mistral generation, served live via Streamlit.

LoveStream: Real-Time WebRTC Video & Screen-Share GitHub
Next.js 16, TypeScript, WebRTC, Supabase Realtime

- Engineered a low-latency peer-to-peer video and screen-sharing app (with system audio), live presence, and an admin console: WebRTC for media transport, Supabase Realtime for presence sync, Next.js 16 + TypeScript on Vercel.

Planity: Full-Stack Task Management Platform GitHub
React, Node.js, MongoDB, Redis, Docker

- Shipped a role-based team task manager with subtasks, soft-delete/restore, real-time notifications, Redis caching, MongoDB Atlas, OpenAPI docs, and a Docker Compose dev environment wired into a CI/CD pipeline.

SKILLS

Languages	Python, TypeScript, JavaScript, SQL, Rust, Bash
Backend	FastAPI, Node.js, REST APIs, WebSockets, Pydantic
AI / LLM	LangChain, LangGraph, LangSmith, RAG, OpenAI, Anthropic, PyTorch, Agent Evaluation
Distributed	Celery, Redis, AWS EventBridge / SQS / Lambda, Event-Driven Architecture, Idempotency, DLQs
Cloud & DevOps	AWS (EC2, Lambda, SQS, CloudWatch), Docker, GitHub Actions
Data	PostgreSQL, MongoDB, Pandas, Grafana, Cohort & Funnel Analysis
Frontend	React, Next.js, Streamlit

EDUCATION

Indian Institute of Information Technology, Sri City | Oct 2022 to May 2026
B.Tech. Computer Science and Engineering, CGPA 8.5/10 | Sri City, Andhra Pradesh

- **Relevant Coursework:** Operating Systems, DBMS, Computer Networks, Distributed Systems, OOP, Cloud Computing, AI/ML.
- **JEE Mains 2022:** 95.65 percentile **Class XII (AP Board):** 97%

ACHIEVEMENTS

Research: Built **ChromaGene** in PyTorch, a transformer that infers cell-type-specific gene expression from ATAC-seq chromatin accessibility data.
