🎓 Education

Year	Degree/Certificate	Institute	CGPA/%
2022 – 2026	B.Tech, Computer Science	Indian Institute of Information Technology, Sri City	8.42/10
2022	Class XII (SSC)	Narayana Engineering College, Nellore	97.00%
2020	Class X (SSC)	Narayana e-Techno School, Nellore	98.67%

🛠 Experience

Kookar AI – AI Product Analyst Intern → AI Engineer Jul 2025 – Present

- Received a **PPO** and was promoted from **AI Product Analyst Intern** to **AI Engineer** after shipping production AI systems used by active customer households.
- Shipped Kookar’s consumer mobile app** (React Native / Expo, Azure Container Apps) covering meal plans, grocery carts, inventory, and Razorpay wallet, live on **App Store and Play Store**.
- Designed meals and grocery agents** that match edits against each household’s dishes and items, reducing edit time and mis-match rate on production requests.
- Built voice editing** so users can open meal plans or grocery carts and speak edits instead of typing long messages: voice is transcribed and a router agent picks the right agent to apply the change.
- Built grocery ordering orchestration** across **6 vendors** (Zepto, Blinkit, BigBasket, Swiggy, Flipkart, Licious) at **60+ orders/day**, with payment capture and delivery tracking (FastAPI, Celery, Redis).
- Built order tracking** after an order is placed: record ordered items, notify the customer, and update payment. Poll vendor APIs until delivery, record received items, update payment again, and send the final delivery confirmation.
- Built cross-vendor price comparison** matching catalog items across 6 platforms to pick the cheapest cart, saving customers **5–7%** per order.
- Built a Chrome extension** that injects cookies, local storage, and session storage from the server-side cart session into the operator’s browser so ops can review the AI-built cart before checkout.
- Built a multi-agent WhatsApp recruiting pipeline** (Node.js) covering resume analysis, question generation, and HITL interviews, screened **500+ candidates** and supported **10 hires**.
- Ran root-cause analysis on production agents** using Sentry and LangSmith traces; diagnosed failure patterns per household and shipped fixes.
- Built per-house observability** tracking meal plans, meal info, grocery carts, inventory, and on-time replies to customers and cooks for every active household.
- Set up agent observability** for accuracy and stuck runs: scored responses against defined metrics, routed failures to POCs to close tickets, and built **Grafana dashboards** for per-agent accuracy and performance by metric.
- Automated daily business reports** on revenue, active users, and churn risk for founders and ops.

📁 Projects

Planity | Full-Stack Team Task Management Platform Nov 2024 – Mar 2026

- Built a MERN task manager with **20 REST endpoints** and **3-role RBAC** over JWT guards: assignment, subtasks, activity logs, notifications, soft-delete/restore.
- Added Redis caching with per-route TTLs (30–60 min) that falls back to MongoDB when Redis is down.
- Documented the API in Swagger; CI runs **7 Vitest / Supertest suites** in GitHub Actions with Docker.

RDISNet | Deep-Learning Image Stitching Apr 2026

- Implemented RDISNet in **PyTorch** with dilated residual blocks and a transformer fusion layer to stitch image pairs into panoramas, avoiding seam/parallax issues from SIFT/ORB.
- Built the training set from COCO images and trained for 30 epochs with MSE loss.

⚙ Skills

Languages	Python, Java, SQL
AI	LangChain, LangGraph, RAG, AI Agents, Vector Databases
Backend	FastAPI, Node.js, Express, Celery, Redis, REST APIs, WebSockets, Event-Driven Architecture
Frontend	React, Next.js, React Native / Expo
Cloud & DevOps	AWS, Azure Container Apps, Docker, Terraform, GitHub Actions
Observability	Grafana, Sentry, PostHog

🏆 Achievements

- Scored **96 percentile** in **JEE Main 2022** (top 4% nationally); got into IIIT Sri City.
- Winners** of the Free Fire tournament at **Abhisarga 2025**, IIIT Sri City’s annual fest.
- Runner-up** in the district skating competition, 2019.
