PROFESSIONAL SUMMARY

Final-year Computer Science student at IIIT Sri City (CGPA **8.42/10**, graduating **2026**) and software engineer at Kookar AI, building and testing event-driven backend **microservices** and **REST APIs** in **Python** on **AWS**. The work powers a grocery order-and-payment pipeline running **60+ orders/day across 6 platforms**, with idempotent processing, automated payment reconciliation, and **CI/CD**. Comfortable in **Agile** teams with regular code review and unit testing.

WORK EXPERIENCE

AI Engineer Intern

Kookar AI, Consumer technology startup

Jun 2025 to Present

Gurgaon, India

- **Built the order-and-payment orchestration layer** for a grocery-automation platform across **6 vendors** (Zepto, Blinkit, BigBasket, Swiggy, Flipkart, Licious), scaling reliable fulfillment to **60+ orders/day** with automated payment reconciliation and retry-aware order tracking (FastAPI, Celery, Redis).
- **Shipped a cross-platform product-matching engine** that aligns the same item across **6 vendor catalogs** using semantic embeddings and LLM matching, powering real-time price comparison so users buy the cheapest cart.
- **Engineered a distributed Celery task pipeline** spanning **22 task types** with idempotent, at-least-once delivery, running on **AWS (ECS Fargate, SQS, EventBridge)** provisioned via Terraform and shipped through GitHub Actions CI/CD.
- **Replaced a resource-heavy video-streaming approach** with a Chrome-extension session-injection service over WebSockets, replicating live browser sessions across concurrent operators at a fraction of the bandwidth.
- **Developed a multi-agent WhatsApp recruiting agent** (Node.js) covering resume analysis, question generation, and a human-in-the-loop interview flow; screened **500+ candidates** and supported **10 hires**.
- **Set up the observability and reporting layer**: a daily Northstar metrics pipeline (GMV, WAU/MAU, churn-risk) auto-delivered to founders, plus **8+ Grafana dashboards** the team runs daily operations on.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL | *Familiar:* Java, C/C++

Backend & APIs: FastAPI, Node.js, REST APIs, WebSockets, Microservices, Event-Driven Architecture, Object-Oriented Programming (OOP)

Frontend: React, Next.js, HTML, CSS, Streamlit

Databases & Caching: PostgreSQL, MongoDB, Redis, Celery, Pandas

Cloud & DevOps: AWS (ECS Fargate, EventBridge, SQS, Lambda), Docker, Terraform, GitHub Actions, CI/CD (Continuous Integration / Deployment), Grafana

Testing & Practices: pytest, Unit Testing, Integration Testing, Code Review, Agile / Scrum, OAuth2 / JWT / RBAC

Computer Science: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Distributed Systems

EDUCATION

Indian Institute of Information Technology, Sri City

B.Tech. Computer Science and Engineering, CGPA **8.42/10**

Oct 2022 to May 2026

Sri City, Andhra Pradesh

- **Relevant Coursework:** Operating Systems, DBMS, Computer Networks, Distributed Systems, OOP, Cloud Computing, AI/ML.
- **JEE Mains 2022:** 95.65 percentile **Class XII (AP Board):** 97%

PROJECTS

Planity: Full-Stack Task Management Platform

GitHub

- Shipped a team task manager exposing **19 REST endpoints** with **3-role RBAC** (Admin / Lead / User), subtasks, soft-delete/restore, Redis-cached reads, MongoDB Atlas, and Swagger docs, backed by **7 Vitest/Supertest suites** in a Dockerized CI pipeline.

React · Node.js · MongoDB · Redis · Docker

LoveStream: Real-Time WebRTC Video & Screen-Share

GitHub

- Engineered a peer-to-peer video and screen-sharing app with system audio, real-time presence, and a signup-free admin console: WebRTC for media transport, Supabase Realtime for presence sync, Next.js 16 + TypeScript on Vercel.

Next.js 16 · TypeScript · WebRTC · Supabase Realtime

Creative Writing Studio: Multi-Agent Platform

Live · GitHub

- Built and shipped a live multi-agent writing platform: 3 specialized agents (Plot, Dialogue, Editor) co-author short stories with FAISS vector memory over running context and Mistral generation, served via Streamlit.

LangChain · Mistral · FAISS · Streamlit

ACHIEVEMENTS

ChromaGene (Deep-Learning Research) | Built a transformer in PyTorch that infers cell-type-specific gene expression from ATAC-seq chromatin-accessibility data.
