SUMMARY

Computer Science graduate from IIIT Sri City (CGPA **8.5/10**) building production backend systems at Kookar AI. Ship distributed services on **FastAPI, Celery, Redis, and AWS** powering a grocery order pipeline (**60+ orders/day across 6 platforms**), a WhatsApp recruiting agent (**500+ candidates screened, 10 hires**), and **10+ LangGraph agents** in production. Seeking full-time Software Engineer, Backend, or AI Engineer roles.

EXPERIENCE

AI Engineer Intern

Jun 2025 to Present

Kookar AI, Consumer AI startup

Gurgaon, India

- **Built the order-orchestration layer** for a grocery-automation platform, scaling reliable fulfillment to **60+ orders/day across 6 integrated platforms** with automated payment settlement and retry-aware order tracking (FastAPI, Celery, Redis).
- **Designed a low-latency browser session-synchronization service** using WebSockets and Chrome extensions, enabling real-time session replication across multiple concurrent clients while replacing a resource-intensive video-streaming solution.
- **Built a WhatsApp AI recruiting agent** (Node.js, Mistral) that autonomously screened **500+ candidates** and closed **10 hires**, replacing a manual screening loop with a multi-agent, human-in-the-loop pipeline.
- **Designed a distributed async pipeline** (Celery, AWS EventBridge, SQS) processing **thousands of events/day** across **20+ task types** with idempotent, at-least-once delivery.
- **Eliminated a recurring weekly on-call page** by root-causing a silent browser-automation bug in the payment path, restoring trust in production alarms.
- **Built a LangSmith-traced orchestration layer** powering **10+ LangGraph agents in production**, cutting a multi-minute manual process to **~40 seconds**, with automated evaluation across model vendors (OpenAI / Anthropic / Mistral).
- **Owned business intelligence and observability**: a daily Northstar metrics pipeline (GMV, WAU/MAU, churn-risk) auto-delivered to founders, plus **4 Grafana dashboards** driving operational decisions.

SKILLS

- Python
- TypeScript / JavaScript
- SQL
- FastAPI
- Node.js
- REST APIs / WebSockets
- LangChain / LangGraph
- LangSmith
- RAG
- OpenAI / Anthropic
- PyTorch
- Celery
- Redis
- AWS (EventBridge, SQS, Lambda)
- Event-Driven Architecture
- Docker
- GitHub Actions
- PostgreSQL / MongoDB
- Pandas
- Grafana
- React / Next.js
- Streamlit

EDUCATION

Indian Institute of Information Technology, Sri City

Oct 2022 to May 2026

B.Tech. Computer Science and Engineering, CGPA **8.5/10**

Sri City, Andhra Pradesh

- **Relevant Coursework**: Operating Systems, DBMS, Computer Networks, Distributed Systems, OOP, Cloud Computing, AI/ML.
- **JEE Mains 2022**: 95.65 percentile **Class XII (AP Board)**: 97%

PROJECTS

Creative Writing Studio: Multi-Agent GenAI Platform

Live | GitHub

- Built and shipped a public multi-agent writing platform: 3 specialized LangChain agents (Plot, Dialogue, Editor) co-author long-form stories with FAISS vector retrieval over running context and Mistral generation, served live via Streamlit.

LangChain · Mistral · FAISS · Streamlit

LoveStream: Real-Time WebRTC Video & Screen-Share

GitHub

- Engineered a low-latency peer-to-peer video and screen-sharing app (with system audio), live presence, and an admin console: WebRTC for media transport, Supabase Realtime for presence sync, Next.js 16 + TypeScript on Vercel.

Next.js 16 · TypeScript · WebRTC · Supabase Realtime

Planity: Full-Stack Task Management Platform

GitHub

- Shipped a role-based team task manager with subtasks, soft-delete/restore, real-time notifications, Redis caching, MongoDB Atlas, OpenAPI docs, and a Docker Compose dev environment wired into a CI/CD pipeline.

React · Node.js · MongoDB · Redis · Docker

STRENGTHS

Production Ownership | Owns systems across design, deployment, and on-call, then root-causes the silent failures others miss.

Rapid, Reliable Delivery | Ships fast across backend, AI, and infrastructure, working directly with founders to turn ambiguous goals into shipped systems and the metrics to measure them.

ACHIEVEMENTS

ChromaGene (Deep-Learning Research) | Built a transformer in PyTorch that infers cell-type-specific gene expression from ATAC-seq chromatin-accessibility data.
